Hi Ailene,

1. The CRC Area is where the fish were caught. The Location Name and Location Code are the ramp/dock/pier that the angler exited the fishery and our samplers were stationed.
2. Some of the sampling sites (ramps/docks/piers) are on the boarder of several CRC Areas. For your example of LoCode 1149 it is located in CRC Area 11, but anglers will launch their boats at that location and travel down to CRC Area 13 or up to CRC Area 10. If you are seeing CRC Area 14 they went all the way up to Canada to fish. Probably for a long weekend. So yes those areas are correct for that LoCode.
3. We do occasionally have some weird CRC Areas show up/land at some of the most unlikely LoCodes. We have had CRC Areas 4 & 4B show up at LoCode 1151, which is located in CRC Area 82. I have attached a sampling site locations list. It has the CRC Area that the site is located in as well as the Washington county. This may help with some of the confusion. If it doesn't feel free to give me a call. That may be easier than email. ;)

Hope this helps.
