Hi Ailene,

I finally was able to complete your information request. I do not have the 1988 data for some reason. Due to the amount of data (21 MB) I have to ship this in multiple smaller files. There will be four total.

General deciphering info:

1987-1993 date format is MDDYY. Some of the years have Location names and some do not. The location code should be the same for all years. Some of the species name are available but some years it was not. All years have species codes though.

1994-1996 date format is MMDDYY. Some of the years have Location Name and some do not. The location code should be the same for all years. The Released Sps are single digit codes. If you add "10" in front of the number it will make it the same as the three digit codes and the species names will be the same. I.e. 1 = 101 (Chinook) or "1" in front of 23 = 123 (Cutthroat Trout).

1997-2000 date format is MMDDYYYY. The Released Sps are single digit codes. If you add "10" in front of the number it will make it the same as the three digit codes and the species names will be the same. I.e. 1 = 101 (Chinook) or "1" in front of 23 = 123 (Cutthroat Trout).

I have included a file (MasterTAFCodesList) with the CRC Area for the numbers that are outside of the CRC Areas 5-13. These are our designations for our Terminal/Special Area fisheries. Places like Sinclair Inlet, Elliott Bay, and Commencement Bay.

Take a look and see if I missed anything. If you have any questions please let me know.

Thank you for your patience,

KK

I'm so sorry about your illness! I hope you recover and feel better! Give yourself permission to rest, even if you feel behind!

Best wishes,

Ailene

Hi Ailene,

My time schedule got set back because I caught the flu on the 8th and it turned into pneumonia. So I am behind...again. ☹ Working as much as I can this week and the following weeks. Just doesn't seem like I can get a full day in though.

I promise next week I will get the data to you.

Hello Karen!

Happy Spring! I hope my email finds you well! Do you have a new estimate of when you may be able to get the salmon rec data together for me? Please let me know if there is anything I can do to help! As we discussed in our phone call, it is fine to leave the data in different formats or units, if that's easier- I am happy to do conversions as needed when I get the data.

Best wishes,

Ailene

Hello Karen!

I hope my email finds you well, and that 2019 is off to a good start for you! Do you think you'll be able to get the salmon rec data together for me this month, as you had hoped? Please let me know if there is anything I can do to help! I may be in Olympia next week, as it turns out, and could stop by and meet you in person!

Best wishes,

Ailene

Hi Ailene,

I am not ignoring you, honest. We are just going through some crazy busy times right now. I am not going to make my mid-December time line that I gave you. I am very sorry. Especially for any inconvenience I am causing with you work load. I many hopes and dreams of completing this for you in January of 2019.

It is actually not an issue to give you all salmonid species. It is just the matter of going back to historical data and formatting it so each year's data is formatted the same. ☺
The fun and time consuming things. ☺

I hope you have a nice holiday season.

Hi Karen!

I'm not sure if you have had a chance to work on this yet, and are still thinking that by the end of December might be doable for you. I wanted to email because I have narrowed in on the following salmon species as most important to me: Chinook, Steelhead, Chum, and Coho. I'm not sure if this helps you or not! Please let me know if you have any other questions or updates.

Thank you again so much for your help with this, and happy holidays!

Hi Ailene,

Sorry I wasn't more specific. I don't know if I will be able to get it finished before the end of December. I will try, but no promises. Sorry.

Unfortunately there isn't anything you can help with. ☺ If I find something I will let you know.

Hello Karen!

I am curious if you have a sense of when you may be able to send the salmon rec data? You had mentioned that it may take a while, and I realized that I wasn't exactly sure what that meant. If there is anything I can do to help, please let me know.

Thank you so much for this!

Yes, all the salmon data, as long as I can see which species is which (chinook vs. sockeye, etc). If that is hard/difficult, then just the Chinook.

thank you!

Just pulling the salmon data is fine. It is actually fewer steps for me. ☺ This was all salmon data yes? Kept and released fish?
Thanks,

KK

Hi Karen!

I am mainly interested in salmon data, but if it is easier to send all data that is fine.

Thank you SO much!

Hi Ailene,

I think I can provide the data that you are looking for. It will just take me a while is all. I don't see a need for you to have to enter in the data by hand. You are you wanting all salmon correct? Do you want marine fish (non-salmonid) as well?

Karen

Hi Karen!

I wanted to follow up on Eric's email to you from a couple of weeks ago. A couple years ago, you had helped me with some data for recreational sampling data for Chinook in Puget Sound (and you'd sent data from ~ 2001 to 2013). The data you sent are by day, which is great!

I'm wondering a few things:

- 1) Would you be able to send daily data for the years since 2013?
- 2) Do you have daily data that goes back further than 2001? If so, would you be able to send that data as well? Otherwise, I am planning to enter in the data from reports by hand- i believe these exist by week for some years.
- 3) Lastly, and lowest priority, do you have similar data for other salmonid species (i.e. daily landings data) in Puget Sound?

I am a postdoctoral research here at NWFSC, studying potential changes in salmon and orca phenology in Puget Sound. Your data seems to be the finest resolution, and I would love to have weekly or daily data to extend the time series back in time! I am happy to tell you more about my research interests, either via phone or email, if you're interested!

Thank you!

Thank you all so much!

I'm sure that I will have questions, once I have had a chance to look through the data a bit. I am happy to share more about what I'm hoping to do, and would certainly value any insights and suggestions you may have.

Best wishes,

Ailene
